A Warm Welcome to our New Members

Upstate Stem Cell cGMP Facility, University of Rochester
Director: Michael Fisk

University of Utah Cell Therapy & Regenerative Medicine Facility
Director: Jo-Anna Reemes

Cryobanks International India
Director: Mrinalini Chaturvedi

**Executive Vice Chancellor
Mark S. Klempner, MD**

FEATURED FACILITY

MassBiologics provides contract services to academic and biopharma clients. The services span all aspects of biological product development - from discovery, to cell line & process development, to GMP manufacture. Our GMP manufacturing capabilities include mammalian cell culture (500 L & 2,500 L), aseptic fill/finish (clinical & commercial scale), in-house QC testing, regulatory and clinical support.

MassBiologics of the University of Massachusetts Medical School, located in Boston, is a non-profit, FDA-licensed manufacturer of vaccines and biologics in the United States. For over 100 years, MassBiologics has worked to improve public health through applied research, development and production of biologic products. Our mission is to discover, develop, and manufacture biological medicines that improve the lives of people in the Commonwealth of Massachusetts and around the world while educating and training a workforce that will perpetuate this public health mission. This includes products for smaller patient populations due to limited incidence of disease (orphan products), uncertain markets as new challenges to public health arise, or products for developing nations with limited resources and unique needs.
